

## Applied Maths Induction Workshop 2 – Relative Motion – Exercises

### 2009 – Ordinary Level – Question 2

A ship  $P$  is moving north at a constant speed of  $20\text{ km/h}$ .

Another ship  $Q$  is moving south-west with a constant speed of  $10\sqrt{2}\text{ km/h}$ .

At a certain instant,  $P$  is positioned  $50\text{ km}$  due west of  $Q$ .

- Find
- the velocity of  $P$  in terms of  $\vec{i}$  and  $\vec{j}$ .
  - the velocity of  $Q$  in terms of  $\vec{i}$  and  $\vec{j}$ .
  - the velocity of  $P$  relative to  $Q$  in terms of  $\vec{i}$  and  $\vec{j}$ .
  - the shortest distance between  $P$  and  $Q$  in the subsequent motion.

### 2006 – Ordinary Level – Question 2

Ship  $A$  is travelling east  $\alpha^\circ$  north with a constant speed of  $39\text{ km/h}$ , where  $\tan \alpha = \frac{5}{12}$ .

Ship  $B$  is travelling due east with a constant speed of  $16\text{ km/h}$ .

At 2pm ship  $B$  is positioned  $90\text{ km}$  due north of ship  $A$ .

- Express the velocity of ship  $A$  and the velocity of ship  $B$  in terms of  $\vec{i}$  and  $\vec{j}$ .
- Find the velocity of ship  $A$  relative to ship  $B$  in terms of  $\vec{i}$  and  $\vec{j}$ .
- Find the shortest distance between the ships.

### 2004 – Higher Level – Question 2(b)

At time  $t = 0$ , two particles  $P$  and  $Q$  are set in motion.

At time  $t = 0$ ,  $Q$  has position vector  $20\vec{i} + 40\vec{j}$  metres relative to  $P$ .

$P$  has a constant velocity of  $3\vec{i} + 5\vec{j}$  m/s and  $Q$  has a constant velocity of  $4\vec{i} - 3\vec{j}$  m/s.

Find

- (i) the velocity of  $Q$  relative to  $P$
- (ii) the shortest distance between  $P$  and  $Q$ , to the nearest metre
- (iii) the time when  $P$  and  $Q$  are closest together, correct to one decimal place.

### 1996 – Higher Level – Question 2

A ship  $B$ , is travelling due West at  $25.6$  km/h. A second ship,  $C$ , travelling at  $32$  km/h is first sighted  $17$  km due north of  $B$ . From  $B$  the ship  $C$  appears to be moving South-east.

Find

- (i) the direction in which  $C$  is actually moving
- (ii) the velocity of  $C$  relative to  $B$
- (iii) the shortest distance between the ships in the subsequent motion
- (iv) the time that elapses, after first sighting, before the ships are again  $17$  km apart.

### 2007 – Higher Level – Question 2(a)

Ship  $B$  is travelling west at  $24$  km/h. Ship  $A$  is travelling north at  $32$  km/h.

At a certain instant ship  $B$  is  $8$  km north-east of ship  $A$ .

- (i) Find the velocity of ship  $A$  relative to ship  $B$ .
- (ii) Calculate the length of time, to the nearest minute, for which the ships are less than or equal to  $8$  km apart.

**2002 – Higher Level – Question 2(a)**

Two boats,  $B$  and  $C$ , are each moving with constant velocity.

At a certain instant, boat  $B$  is 10 km due west of boat  $C$ .

The speed and direction of boat  $B$  relative to boat  $C$  is  $2.5\text{ m/s}$  in the direction  $60^\circ$  south of east.

- (i) Calculate the shortest distance between the two boats, to the nearest metre.
- (ii) Calculate the length of time, to the nearest second, for which the boats are less than or equal to 9 km apart.

**2009 – Higher Level – Question 2(a)**

Two cars,  $A$  and  $B$ , travel along two straight roads which intersect at right angles.

$A$  is travelling east at  $15\text{ m/s}$ .

$B$  is travelling north at  $20\text{ m/s}$ .

At a certain instant both cars are 800 m from the intersection and approaching the intersection.

- Find
- (i) the shortest distance between the cars
  - (ii) the distance each car is from the intersection when they are nearest to each other.

**2008 – Higher Level – Question 2(a)**

Two straight roads cross at right angles.

A woman  $C$ , is walking towards the intersection with a uniform speed of  $1.5\text{ m/s}$ .

Another woman  $D$  is moving towards the intersection with a uniform speed of  $2\text{ m/s}$ .

$C$  is 100 m away from the intersection as  $D$  passes the intersection.

- Find
- (i) the velocity of  $C$  relative to  $D$
  - (ii) the distance of  $C$  from the intersection when they are nearest together.

**2009 – Higher Level – Question 2(b)**

The speed of an aeroplane in still air is  $u$  km/h .

The aeroplane flies a straight line course from  $P$  to  $Q$  , where  $Q$  is north of  $P$  .

If there is no wind blowing the time for the journey from  $P$  to  $Q$  is  $T$  hours.

Find, in terms of  $u$  and  $T$  , the time to fly from  $P$  to  $Q$  if there is a wind blowing from the south-east with a speed of  $4\sqrt{2}$  km/h .

**2006 – Higher Level – Question 2(a)**

Two aeroplanes  $A$  and  $B$  , moving horizontally, are travelling at 200km/h relative to the ground. There is a wind blowing from the east at 60km/h . The actual directions of flight  $A$  and  $B$  are north-west and north-east respectively.

- Find (i) the speed of aeroplane  $A$  in still air  
(ii) the magnitude and direction of the velocity of  $A$  relative to  $B$  .

**2008 – Higher Level – Question 2(b)**

On a particular day the velocity of the wind, in terms of  $\vec{i}$  and  $\vec{j}$  , is  $x\vec{i} - 3\vec{j}$  , where  $x \in \mathbb{N}$  .

$\vec{i}$  and  $\vec{j}$  are unit vectors in the directions East and North respectively.

To a man travelling due East the wind appears to come from a direction North  $\alpha^\circ$  West where  $\tan \alpha = 2$  .

When he travels due North at the same speed as before, the wind appears to come from a direction North  $\beta^\circ$  West where  $\tan \beta = \frac{3}{2}$  .

Find the actual direction of the wind.

**2010 – Higher Level – Question 2(b)**

When a motor-cyclist travels along a straight road from South to North at a constant speed of  $12.5 \text{ ms}^{-1}$  the wind appears to come from a direction North  $45^\circ$  East.

When she returns along the same road at the same constant speed, the wind appears to come from a direction South  $45^\circ$  East.

Find the magnitude and direction of the velocity of the wind.
